## EASY INSTALLATION

- 1 Before installation, your subfloor must be clean, level and dry. Use a Portland based patch if necessary and suitable primer over entire subfloor.
- 2 Place tiles in position, leaving space for grout. Press tiles against sub-floor for good contact.
- 3 Using the grout float, press the dispensed grout into the grout joints. Rake the float diagonally at a 45° angle across the tile surface while exerting a downward pressure. Remove all excess grout from the tile surface. Use damp sponge to smooth grout joints and clean off any remaining excess grout.

## How much flooring do you need?

- Measure the length & width of your room. If your room has alcoves or offsets, measure these areas separately
- Each tile carton contains 30 sq. ft. of flooring.
- Recommended purchase of 10% extra will account for trimming variations or cutting floor pieces. The chart below calculates this overage for you.
